Rotterdam, Netherlands

PROFESSIONAL PROFILE

Experienced backend engineer specializing in cloud-native distributed systems, high-throughput Go services, and resilient platform architecture. Strong background designing gRPC APIs, operating Kubernetes workloads, provisioning infrastructure with Terraform, and leading engineering teams delivering reliable product infrastructure.

PROFESSIONAL EXPERIENCE

Senior Distributed Systems Engineer

Mar 2022 - Present

HarborPeak Technologies · Rotterdam, Netherlands

Team leadership: managed 8 people

- Led a team of exactly 8 engineers responsible for event-driven backend services, shared platform libraries, and production reliability practices.
- Designed and built gRPC services in Go supporting low-latency account, billing, and notification workflows across multiple product domains.
- Standardized Kubernetes deployment patterns and Terraform modules, reducing environment drift and improving release consistency.
- Improved PostgreSQL query plans, connection pooling, and schema migration practices for services handling high transaction volumes.

Technologies: Go, gRPC, PostgreSQL, Kubernetes, Terraform, Prometheus, Grafana, NATS

Backend Platform Engineer

Jul 2018 - Feb 2022

CanalWorks Software · Amsterdam, Netherlands

- Developed Go microservices with gRPC and REST interfaces for a multi-tenant logistics platform.
- Migrated container workloads from virtual machines to Kubernetes, improving deployment frequency and rollback safety.
- Created Terraform configurations for cloud networking, service accounts, databases, and observability components.
- Partnered with data teams to optimize PostgreSQL schemas and introduce partitioning for operational reporting workloads.

Technologies: Go, gRPC, REST, PostgreSQL, Kubernetes, Terraform, Docker, Redis

Software Engineer

Sep 2015 - Jun 2018

Northstar Ledger Labs · Utrecht, Netherlands

- Built backend services for payment reconciliation, batch processing, and internal administration tools.
- Introduced automated integration testing around database-heavy workflows, improving confidence in weekly releases.
- Refactored legacy service modules into clearer domain boundaries and documented API contracts for partner teams.

Technologies: Java, Go, PostgreSQL, Docker, RabbitMQ, JUnit
