Helsinki, Finland

PROFESSIONAL PROFILE

Experienced Senior Data Engineer specializing in reliable analytics platforms, workflow orchestration, and cloud data pipelines. Strong background building Python and Apache Airflow pipelines backed by PostgreSQL, dbt transformation models, and AWS services, with hands-on leadership of data engineering teams delivering governed data products for product, finance, and operations stakeholders.

PROFESSIONAL EXPERIENCE

Senior Data Engineer

Feb 2022 - Present

Nordvale Analytics · Helsinki, Finland

Team leadership: managed 5 people

- Lead a team of 5 data engineers responsible for batch and near-real-time data pipelines across product analytics, billing, and customer success domains.
- Designed and maintained Apache Airflow DAGs in Python that ingest, validate, and load operational data into PostgreSQL and cloud data stores on AWS.
- Introduced dbt standards for modular SQL models, documentation, testing, and lineage, improving trust in executive reporting datasets.
- Partnered with platform engineers to improve pipeline observability, alerting, and deployment reliability using infrastructure-as-code practices.

Technologies: Python, Apache Airflow, PostgreSQL, dbt, AWS, Amazon S3, AWS Glue, Terraform, GitHub Actions

Data Engineer

Apr 2019 - Jan 2022

Lumora Digital Services · Espoo, Finland

- Built Python-based ETL pipelines orchestrated with Apache Airflow to consolidate subscription, payment, and marketing data into PostgreSQL analytics schemas.
- Developed dbt transformation layers with reusable macros, source freshness checks, and automated data quality tests for BI teams.
- Migrated legacy scheduled scripts to AWS-managed storage and compute patterns, reducing manual maintenance and improving pipeline recovery time.
- Created onboarding documentation and code review guidelines for junior data engineers joining the analytics platform team.

Technologies: Python, Apache Airflow, PostgreSQL, dbt, AWS, Amazon Redshift, Amazon S3, Docker

HelioWorks Software · Helsinki, Finland

- Developed SQL data marts and reporting datasets for sales, support, and finance stakeholders using PostgreSQL.
- Automated recurring data extracts with Python scripts and scheduled jobs, replacing manual spreadsheet-based reporting processes.
- Worked with analysts to define metric logic, improve dashboard performance, and document source-to-report data flows.

Technologies: Python, PostgreSQL, SQL, Tableau, Linux, Git
