Bologna, Italy

PROFESSIONAL PROFILE

Junior Data Scientist with 2 years of data-analysis experience in preparing datasets with pandas and SQL, exploring trends in Jupyter, and building classification models with scikit-learn. Focused on clear analytical reporting, reproducible notebooks, and practical machine learning for customer and operations use cases.

PROFESSIONAL EXPERIENCE

Junior Data Scientist

Jul 2025 - Present

Asteria Retail Analytics · Bologna, Italy

- Prepared customer, product, and transaction datasets using SQL queries and pandas pipelines for weekly analytics reporting.
- Built scikit-learn classification models to identify churn risk segments and compared performance with precision, recall, and ROC-AUC metrics.
- Created Jupyter notebooks documenting data cleaning steps, exploratory analysis, feature engineering, and model evaluation results.
- Collaborated with business analysts to translate model outputs into retention campaign recommendations.

Technologies: Python, pandas, scikit-learn, SQL, Jupyter

Data Analyst Intern

Jul 2024 - Jun 2025

Luminara Digital Services · Bologna, Italy

- Used SQL to extract operational data and pandas to clean missing values, standardize categories, and prepare analysis-ready tables.
- Developed Jupyter notebook dashboards summarizing monthly acquisition, conversion, and support metrics.
- Assisted senior analysts with exploratory analysis and documented reproducible workflows for recurring reporting tasks.

Technologies: Python, pandas, SQL, Jupyter

SELECTED PROJECTS

Customer Churn Study 2026

Built a scikit-learn classification project to predict customer churn risk from prepared customer activity data. Used Python and pandas for data cleaning, feature preparation, and exploratory analysis before evaluating classification performance in reproducible notebooks.

Technologies: Python, pandas, scikit-learn
