Patras, Greece

PROFESSIONAL PROFILE

Senior Data Scientist with 10 years of experience building production analytics, NLP models, and experimentation frameworks for digital products. Skilled in Python, pandas, scikit-learn, statistical testing, and translating model outputs into measurable product and customer outcomes. Experienced mentor and people lead, including managing a team of 3 data scientists.

PROFESSIONAL EXPERIENCE

Senior Data Scientist

Jul 2022 - Present

Asteri Analytics Group · Patras, Greece

Team leadership: managed 3 people

- Lead product analytics and predictive modelling workstreams for subscription and customer-support teams, using Python and pandas to prepare reliable feature datasets.
- Built NLP classifiers for Greek and English support conversations, improving topic routing and surfacing emerging customer issues for operations managers.
- Designed an experimentation framework for A/B tests, including power analysis, guardrail metrics, and automated reporting for product stakeholders.
- Manage a team of 3 data scientists through roadmap planning, code reviews, coaching, and stakeholder prioritisation.

Technologies: Python, pandas, scikit-learn, NLP, spaCy, SQL, Jupyter, Experimentation

Data Scientist

Mar 2019 - Jun 2022

HelioMetric Solutions · Athens, Greece

- Developed churn and propensity models with scikit-learn, improving campaign targeting for retail and telecom clients.
- Created reusable pandas pipelines for feature engineering, model validation, and weekly monitoring of predictive-model performance.
- Partnered with product teams to define experiment hypotheses, segment users, and interpret uplift and confidence intervals.
- Prototyped NLP entity extraction for customer feedback surveys to quantify recurring themes across markets.

Technologies: Python, pandas, scikit-learn, SQL, NLP, NumPy, Matplotlib, Experimentation

Ionian Data Works · Patras, Greece

- Built forecasting and classification models for logistics datasets using Python, pandas, and scikit-learn.
- Automated data-quality checks and exploratory reporting, reducing manual analysis effort for operations analysts.
- Supported controlled experiments for route-planning changes by preparing cohorts, tracking metrics, and summarising statistical results.

Technologies: Python, pandas, scikit-learn, SQL, SciPy, Experimentation
