Utrecht, Netherlands

PROFESSIONAL PROFILE

Junior Machine Learning Engineer with 2 years of experience building Python-based machine learning services, including PyTorch transformer models served through FastAPI. Comfortable containerizing model APIs with Docker, improving NLP pipelines, and collaborating with product and backend teams to move prototypes into reliable internal tools.

PROFESSIONAL EXPERIENCE

Junior Machine Learning Engineer

Jul 2025 - Present

Canal Metrics Labs · Utrecht, Netherlands

- Built and maintained NLP model services in Python for document triage and metadata extraction workflows.
- Served a fine-tuned PyTorch transformer model through FastAPI, adding request validation, confidence scores, and structured JSON responses.
- Containerized model inference APIs with Docker to support consistent local development and staging deployments.
- Worked with data analysts to review misclassifications and improve preprocessing rules for Dutch and English documents.

Technologies: Python, PyTorch, Transformers, FastAPI, Docker, Pandas, Git

Machine Learning Engineering Intern

Jul 2024 - Jun 2025

DeltaBridge Intelligence · Amersfoort, Netherlands

- Developed Python experiments for text classification and entity extraction using PyTorch and transformer-based language models.
- Created reproducible training notebooks and lightweight evaluation scripts to compare model checkpoints on labeled document datasets.
- Packaged prototype inference code into simple FastAPI endpoints for review by backend engineers.
- Documented dataset assumptions, model metrics, and deployment steps to support handover into production-oriented services.

Technologies: Python, PyTorch, Transformers, FastAPI, scikit-learn, NumPy, Docker

EDUCATION

Bachelor of Science in Artificial Intelligence and Software Engineering

Utrecht Applied Technology College

2020 - 2024 · Utrecht, Netherlands

SELECTED PROJECTS

Document Classification Service 2025

Created a document-classification service that fine-tunes a PyTorch transformer model and exposes predictions through a FastAPI endpoint for uploaded text documents.

Technologies: Python, PyTorch, Transformers, FastAPI
