Hamburg, Germany

PROFESSIONAL PROFILE

Senior Enterprise Full-Stack Engineer with 11 years of full-stack experience delivering Java, Spring Boot, React, and TypeScript platforms for enterprise operations. Experienced in modernizing legacy application estates into cloud-ready, Kubernetes-based services and in managing a team of 6 engineers through architecture, delivery planning, and production support.

PROFESSIONAL EXPERIENCE

Senior Enterprise Full-Stack Engineer

Aug 2022 - Present

Elbforge Digital Systems GmbH · Hamburg, Germany

Team leadership: managed 6 people

- Modernized a Spring Boot and React platform used for customer onboarding, reducing release effort through modular services and reusable TypeScript components.
- Managed a team of 6 engineers across backend, frontend, and platform workstreams, including code reviews, mentoring, and sprint delivery.
- Introduced Kubernetes deployment patterns, readiness checks, and structured observability for safer enterprise releases.
- Partnered with product and security stakeholders to evolve architecture standards for Java APIs and React front ends.

Technologies: Java, Spring Boot, React, TypeScript, Kubernetes, PostgreSQL, REST APIs, Docker, GitLab CI

Full-Stack Engineer

Jul 2018 - Jul 2022

Harborline Enterprise Solutions GmbH · Hamburg, Germany

- Built enterprise workflow modules using Java and Spring Boot services with React and TypeScript user interfaces.
- Migrated monolithic screens into API-driven front-end features, improving maintainability and enabling independent release cycles.
- Implemented automated integration tests and containerized local development environments to shorten onboarding time.
- Collaborated with operations teams to prepare services for Kubernetes-based staging and production environments.

Technologies: Java, Spring Boot, React, TypeScript, Kubernetes, MySQL, Docker, Jenkins, JUnit

Software Developer

Jul 2015 - Jun 2018

Nordlicht Business Platforms GmbH · Lübeck, Germany

- Developed internal web applications with Java services and JavaScript-based front-end components for logistics and finance teams.
- Enhanced REST API performance and improved database access patterns for high-volume reporting features.
- Supported production troubleshooting and release coordination for business-critical enterprise applications.

Technologies: Java, Spring MVC, JavaScript, HTML, CSS, Oracle Database, REST APIs, Maven
